## Course Description

This training course introduces Login Enterprise for customers who want to provide an excellent end-user experience on their digital workspace. The training course describes the features and benefits of Login Enterprise. It is ideal for organizations moving toward an Agile or DevOps approach to focus on controlling and improving the end-user experience. The training will give attendees an overall understanding of Login Enterprise as a solution and how it needs to be installed, configured, maintained, and used in the most optimum way.

## Audience and Job Roles

The training course is for Support- & Project Engineers, Consultants and Architects who will be involved with the implementation and future usage & maintenance of Login Enterprise. The main use cases are:

- Performance and Availability Testing
- Application and Infrastructure Load Testing
- Application Compatibility Testing

## Prerequisites and Recommended Skills

For the best experience and understanding of this course, you should have the following prerequisites or knowledge:

- Working knowledge of Windows remote desktop services
- Working knowledge of Windows applications
- Working knowledge of Windows active directory and other domain services
- Basic understanding of scripting

## Certification

Yes. Based on an exam.
