

Login VSI's Top 3 Hacks

for Reeling in VDI and DaaS Costs

Desktop virtualization is critical to supporting remote and distributed workforces. But at what cost?

88% of IT executives say optimizing EUC spend is extremely important—but nearly 50% can't get costs under control.

Here are 3 ways to tackle your VDI and DaaS costs and avoid sticker shock:

Hack #1:

Find the right trade-off between user experience and cost.

In VDI and DaaS environments, costs can balloon quickly. Keep costs manageable by using Login Enterprise to:

- Balance user experience and costs
- Choose the optimal storage for virtual machines
- Adjust the configuration at any point

Hack #2:

Identify the ideal cost per user

Spot opportunities for savings in hybrid and on-prem environments. Use Login Enterprise to:

- Analyze and assign costs between compute, network, storage, application, and security layers.
- Compare strategies to lower cost per component.
- Understand the cost impact when changing a component in the stack

Hack #3:

Be on the lookout for potential cost savings.

See how your optimization initiatives impact cost by using Login Enterprise to:

- Evaluate usage and infrastructure to identify cost savings
- Compare potential changes to lower overall costs
- Understand the impact of possible virtualization changes
